## Introduction

This documentation covers the basic process of installing eMeeting Plugins. It will take you through the basic steps of downloading and installing a plugin on your eMeeting dating website.

## Requirements

It is recommended that you have a basic knowledge of computers and FTP commands in order to download and upload the plugin files to your website.

## Downloading Plugins

eMeeting dating software plugins can be downloaded from our website at [www.datingscripts.co.uk](http://www.datingscripts.co.uk). There are a number of plugins already included in the software along with additional ones provided via the forum pages.

A plugin file will be in the form of a .ZIP (win zip) file which you will need to extract onto your desktop and upload the contents.

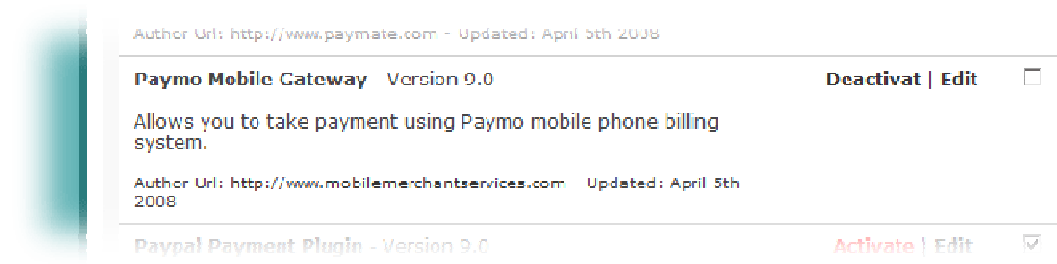

## Uploading Plugins

To upload a plugin you will need to be familiar with an FTP program such as CuteFTP or SmartFTP. There are many other FTP programs available and all of which will work fine.

You will need to upload the contents of the downloaded plugin to the folder below;

**(eMeeting Install Directory) /plugins/plugins/**

Once uploaded, if the plugin is correctly formatted you should see it listed in the eMeeting admin area under plugins;
